

TECHNICAL NOTE

CARRYOVER VOLUME CONFIGURATIONS

STANDARD CARRYOVER VOLUME *Competitors*

Carryover volume up to **50 μ L**.

LOW CARRYOVER VOLUME

Syringe attachment modified to minimise the distance from the plug to the syringe. Carryover volume of **2.47 μ L**.

ULTRA-LOW CARRYOVER VOLUME

Valve design altered (two channels in the plug) to minimise the carryover volume inside the plug. Carryover volume of **1.4 μ L**.

WHAT ARE WE DOING?

The carryover volume is defined as the volume of liquid that will be mixed with the next liquid. It is not stuck, but will be swept next time a liquid passes.

We developed a special configuration to minimise the carryover volume in our syringe pumps, for specific applications that require close to no contamination.

WHAT'S IN IT FOR YOU?

- Limited contamination
- Multiple liquids
- Automation
- Small reagent quantities
