

# TECHNICAL NOTE

## SEQUENTIAL LIQUID HANDLING

### WHAT ARE WE DOING?

Using a distribution valve, whatever the number of ports (4, 6 or 8), it is possible to inject different liquids sequentially into your setup. Since the LSPone and SPM directly integrate a distribution valve, it is possible to have the pump and valve in a unique instrument.

### WHAT'S IN IT FOR YOU?

- Repeatability
- Automated system
- Flow control
- Minimal bench space
